The New EcoShelta bigpod

To all our clients currently considering investing in an ecoshelta system...

EcoShelta are pleased to announce the release of our new model, the ecoshelta bigpod. The new model is based on a larger basic floor grid of 4.8m. (compared to a 3.6m floor grid for the e.pod) giving it 75% more floor area with the following new features:

- 21.5 SqM. of useable internal floor space per bigpod;
- Wider opening doors;
- Simpler, improved weatherproofing detailing for exposed locations;
- Near level deck for ease of access (disabled access available);
- Adaptable floor structure allowing the option of fully fitted floors.

The bigpod retains the design flexibility and modular construction system of the EcoShelta system, together with all the state of the art structural and detailing innovations and environmental responsibility the e.pod offers and it still only takes a day to assemble each pod on your site.

We are pleased to say that careful cost control in the design and prototype development have produced a significantly improved product at a highly competitive cost per square metre.

Please contact Stephen directly for an information package on our new system or to discuss the application of the new bigpod for your project.
